

AmpMe Adds Spotify Music Streaming Service

Music-syncing app AmpMe launches its number one user request: integration with the Spotify music streaming service

Montreal, Quebec – AmpMe, the app that allows users to play music in perfect sync across multiple devices to create one powerful sound system, today announced that users can now connect to the Spotify music streaming service in addition to existing music streaming services: SoundCloud, YouTube, and their personal music library. AmpMe allows Spotify premium users to sync their phones, tablets and Bluetooth speakers together, cranking the party up without limitations. Party participants simply log into their Spotify premium accounts in order to stream music from Spotify. The free app is now available in 144 countries around the world in the App Store and on Google Play.

In addition to integrating Spotify, AmpMe is now more social than ever by allowing partygoers to see other participants who have joined the party. Connecting to parties is easy; the smartphone automatically detects nearby parties as well as syncs to any connected Bluetooth speaker already paired to an AmpMe enabled device. The only limit is the number of devices in the party with AmpMe installed.

“From day one, we’ve been hearing from tens of thousands of users, journalists, friends and anyone else who has tried the app: ‘When’s Spotify coming?!?’ We’ve heard your pleas and are thrilled to let you ‘amp it up’ with Spotify,” said AmpMe CEO Martin-Luc Archambault. “Our mission is to make music accessible everywhere and Spotify’s mission is to provide music for everyone; this integration makes music accessible everywhere for everyone.”

Specifications:

- Compatible with Android 4.1+ and iOS 9.0+
- Able to synchronize an unlimited number of iOS and Android mobile phones and tablets
- Compatible with Spotify, YouTube, SoundCloud and your personal music library; more streaming services to follow soon
